

## MICHAEL WOLFE

Michael Wolfe is a junior physics and mathematics double major with a minor in jazz performance. Aside from his research, he spends his summers and winters at NASA working as a control systems engineering intern. Michael also enjoys teaching physics to his peers and assisting professors in both introductory and upper-level physics classes. Outside of academics, Michael is an avid musician, performing throughout the Baltimore area and supporting local music. Michael is grateful for the guidance and expertise of his mentor, Dr. Jason Kestner. He is also thankful for Fernando Calderon-Vergas, whose support and encouragement helped him through challenging aspects of the research. The past two years of research have inspired Michael to pursue a Ph.D. in physics and continue working in the exciting field of quantum computing.
